

Silas Public

Overview

Silas Public is a simple, interactive program built with care for a friend's neurodivergent son. It's a work in progress, designed to bring color, kindness, and whimsy into everyday interactions.

This app isn't about rigid structure - it's about soft prompts, simple joys, and friendly surprises.

Silas Public is intended to be playful, expressive, and gentle - welcoming for children and adults alike.

Purpose

This project is an ongoing effort to:

- Encourage engagement through color and sound
- Provide a simple emotional check-in space
- Offer friendly feedback based on mood or input
- Create a space that invites interaction without pressure

It was created for Silas, age 10-12, who is on the autism spectrum. Feedback is ongoing, and every change comes from listening, learning, and adapting to what works best for him.

Features

- Colorful, touch-friendly interface (no typing required)
- Mood-based responses with matching colors or emojis
- Soft sounds or animations for gentle encouragement
- Output of responses saved to file for journaling or reflection
- French-English whimsical personality baked into the app

This project embraces intentional confusion and unexpected humor as part of its charm.

Technology

- Built in Python

Silas Public

- GUI using Tkinter
- Future improvements may include touch controls, better visuals, and optional voice support

License & Contribution

This is an open, evolving project shared for learning and laughter.

If you'd like to contribute ideas, feedback, or improvements - please reach out.

This software is provided as-is, in the spirit of creativity and care.
