

# Silas - Interactive Cheer Button Companion

Silas is a cheerful digital companion designed for joy, encouragement, and interactivity. This program features a simple GUI with buttons that, when clicked, trigger fun and positive responses. Designed originally to support neurodivergent users and brighten someone's day, Silas is a visual and auditory boost when needed.

Features: - Friendly GUI interface - Interactive button-driven responses - Customizable reactions and visuals - Designed to delight and uplift

Setup: 1. Ensure you have Python 3.x installed. 2. Install any required libraries (tkinter is usually built-in). 3. Run silas.py to launch the program.

Silas is meant to be expanded — consider adding animations, sounds, or changing the theme to personalize the joy!
